Fast, secure access from anywhere

HPE Solutions for Remote Workers

Solution brief

Enable work-from-home productivity

The last few years have proven that every business needs a strategy for keeping employees productive when they need to work outside the office. Whether that's suddenly, due to an unexpected disruption, or ongoing to improve employee productivity and quality of life.

Anytime, anywhere reliable access to the files and applications employees need to do their jobs is just one piece of the puzzle. You need to provide this reliability and performance while preserving version control, keeping things simple for IT, and ensuring sensitive data is protected and secure.

Virtual desktop infrastructure (VDI) technology can address these challenges by granting employees secure remote access to files and applications—even highly confidential or classified information—from their preferred devices so they can log on to the server at the main office and work from anywhere.

But identifying and deploying a VDI solution with the right balance of performance, cost, management simplicity, and scalability for small to midsize businesses (SMBs) can be challenging.

HPE Solutions for Remote Workers enable a productive work-from-home (WFH) experience with solutions that are ideal for as few as 10 to as many as 180 users, enabling people to work efficiently from any location.

HPE GreenLake

Work smarter everywhere

HPE Solutions for Remote Workers are based on HPE ProLiant rack and tower server configurations capable of meeting a wide variety of SMB VDI requirements.

Based on a variety of independent software vendor platforms like VMware Horizon®, Teradici Cloud Access Software, and Microsoft Remote Desktop Service, they give you freedom of choice, including high-performance configurations featuring the latest AMD powered HPE ProLiant Gen10 Plus v2 servers.

Together, these solutions enable:

- **Productivity:** Make sure people can work efficiently from any location by providing remote access to a full suite of office applications and data.
- **Security:** Provide safe and secure remote access without compromising on performance or features.
- **Control:** Stay in control, with software applications hosted and data stored in a central, on-site location.

Easily evolve to hybrid cloud

HPE Solutions for Remote Workers can be easily extended to hybrid cloud for additional disaster recovery options with cloud services from Microsoft Azure or a managed service provider.

Empower anywhere productivity today

HPE can help you provide WFH productivity, security, and control. Contact your authorized HPE representative to find out more.
